A

A

Angelo, La Mirada (LMA)

35 year old stand renamed (has also been called *la mirada bridgesii*) after the recent deceased husband of the homeowner. Now homeowner says it is an ugly plant to her, but everyone tells her they love it.

- Lots of spineless growth on the upper sections
- notchy areoles
- spines go from yellow to white as they bleach

B

B

Bruce's Dragon

Believed to be a *bridgesii* hybrid monstrose form. This was acquired by Mark Buckley and another who helped the original owner out on his property when they spotted a huge stand. The owner didn't like the plant so they worked out a deal to cut it down and haul it away. Started being sold wider around 2022.

Church Hill

C

Capistrano

Trichocereus Pachanoi

Location found: Capistrano, California

Founder: Guy O'conner (2022)

Description:

- consistent thick smooth columns
- extra small aeroles that can change color from red/orange to white
- almost spineless
- deep green in full sun (can develop a chalky blue glaucous when shade grown)
- can skip aeroles with a notch instead
- known to display variegation patches, occasionally columns going full variegate

Similar to: Skip and other SoCal pachanoi

Dino

Trichocereus Scopulicola

D

Darth Vader Scop

Clone located by Gussy in AU around 2016. Later renamed by JN Darth Vader scop, given it's darker color than the rest.

D

Dixie Fire #1

Cuts from a farmer who saved them during the California "Dixie Fire".

D

Dixie Fire #2

Cuts from a farmer who saved them during the California "Dixie Fire".
