

Trent Peruvianus

From SAB:

Trent is an Australian clone originating from the defunct Arizona Cactus Nursery, Sydney NSW. Likely from one of the collectors that sold on commission there, Trent was named by Torsten, SAB owner, and distributed from our own SAB nursery.

Trent is a gorgeous frosty blue grey cactus that grows fat with a good disease resistance. It is a typical peruvianus in many ways but an extra special one at the same time. Trent is a standout due to its large, padded areoles and golden-brown tipped spines displayed on its frosty glaucous body.
